SAVE ON MATERIALS

ROOF TRUSSES

Roof trusses are used in the majority of new housing in the UK and Ireland and are increasingly being used in commercial and industrial settings.

A trussed rafter roof is a fully engineered structure delivering a practical and versatile roofing solution. When compared with a traditionally built roof, trussed rafters will typically deliver considerable material savings often using 40% less timber.

Manufactured offsite in factory controlled conditions, roof trusses offer immense versatility. A wide variety of truss configurations allow for a huge range of different applications, such as room in the roof (Attic) trusses, raised ceiling trusses, and scissor trusses. Trussed rafters can be manufactured in a wide range of timber sections, with larger sections allowing for big spans for a variety of commercial applications .

MiTek has the largest network of [truss manufacturers](#) , and when dealing with a MiTek fabricator you can be confident that you are dealing with a company using the very latest in design and [engineering software](#) , with the full backup of MiTek’s exceptionally experienced support team of technical experts.

BENEFITS OF TRUSSED RAFTERS

- ➔ Suitable for a wide range of roof structures and building types
- ➔ Speed of construction allows just-in-time delivery to site
- ➔ Space saving – limited on-site storage area required
- ➔ Made of timber, the only truly renewable building resource
- ➔ Minimal environmental impact from installation
- ➔ Significant installation time savings over traditional methods of construction
- ➔ Potentially eliminate steel beams from the roof structure
- ➔ Large and complex roofscapes can be achieved
- ➔ Attic Trusses can maximise useable living space in the property
- ➔ Spans of up to 18m can be manufactured
